QUICK STUDY RADIOLOGY ANNOUNCES THREE NEW CLIENTS

Rural Hospitals, Imaging Center Benefit from Leading-Edge Technology

ST. LOUIS, Mo., March 14, 2005 -- Quick Study Radiology (QSR) is pleased to announce three new clients in 2005.

These two rural hospitals and one imaging center in Georgia and Illinois will benefit from QSR's state-of-the-art medical technology by providing them with the tools necessary to meet patients' needs in the communities they serve.

QSR helps bring to small community and rural hospitals the same leading-edge radiology technologies available to large hospitals. The facilities that selected QSR for their radiology imaging needs are:

Chestatee Regional Hospital in Dahlonega, Ga., purchased both the PACS and RIS (radiology information systems) technology for its 49-bed acute care hospital and another PACS system for its **Imaging Center** in Dawsonville, Ga. The hospital is the only primary care facility that serves Lumpkin and Dawson counties. "QSR's product yields a high level of service that is efficient -- yet with a cost structure that we can afford. The rapid implementation is another benefit to us as well as our patients," CEO Rob Followell said.

Marshall Browning Hospital in DuQuoin, Ill., purchased the PACS system for its 25-bed facility. "Hospitals in small towns tend to be one of their area's largest employers," said CEO William Huff, "and with high-value technology such as QSR provides, we are able to provide high levels of care to area residents, continue to attract and serve patients, and keep healthcare jobs in our community."

QSR Founder, President and CEO Skip Sallee, M.D., said the client selections were gratifying. "Being selected by these institutions validates the caliber of our product," Dr. Sallee said, "and reflects our ability to provide them with premium technology that is cost-effective."

About QSR

Quick Study Radiology is expanding its services in a rapidly growing market and offers an integrated solution to address the challenges and needs of community hospitals by providing information technology services for hospital radiology departments, imaging centers and physician groups. Specifically, QSR offers implementation and support of integrated digital radiology information systems, including PACS (picture archive communication system), RIS (radiology information systems), archiving, web distribution and interfaces.

QSR's investors include Advantage Capital Partners, Mantic Investments, Schroder Ventures, Mi3, Fletcher Spaght Ventures, Prolog Ventures, Mississippi Valley Capital and Eagle River.
